

Aerial Work Platform

Aerial Work Platforms - There are many accessories meant for forklifts that can be used to help expand the capabilities of your forklift and allow you to carry stuff, handle materials with less effort or to finish clean-up tasks.

A lot of the accessories are particularly designed to be able to fit on the forks themselves. Blade extensions for example, are utilized if you need more fork length, that increases lifting capacity. Fork extensions come in lengths ranging from forty eight to one hundred twenty inches. Rounded or triangular accessories are one more variety used whenever transferring rolled material so as to ensure it does not roll off of the traditional flat blades.

Examples of lifting accessories include pivoting and telescoping crane or boom attachments. They can come in a number of various kinds and are most often meant for transferring metal bars, lumber, poles and different types of bulky objects. Additional accessories like for instance other styles of hook plates and hooks are obtainable so as to pick up stuff making use of a chain or sling. Slab lifters and magnetic filters are other things that can be utilized with hook attachments. Slab lifters are specialized attachments which are meant for carrying different materials that are delivered in a sheet or slab format. Rug rams or carpet poles are other lifting tools that connect to your forklift so as to make transferring rolls of carpet a lot easier. The attachment hooks onto the lift truck's forks and has a pole that goes through the center of the carpet roll.

There are various kinds of forklift accessory used for facility maintenance like for instance snow forks. These industrial blades could be connected to front end loaders and meant for moving materials like dirt, and mulch as well as snow. Other common cleanup accessories comprise magnetic sweepers and standard sweepers. Standard sweepers consist of a broom that the forklift blades hook onto for sweeping large spaces like for example warehouse, factory floors and parking lots. The magnetic sweeper is the same except that it has a magnetic plate rather than bristles. The magnetic sweeper is utilized in places where there is lots of metal fragments like on shop floors for example. Sweepers have widths as much as 60 inches and this surface area makes clean up quick and easy.

Material spreaders are other accessories used on lift trucks. These spreaders are helpful for a variety of applications like for instance spreading seeds, ice melt, rock salt, pellets, fertilizers and insecticides.

Work platforms are another optional lifting attachment that many businesses utilize day by day. The platforms range in size from 36" x 36" to up to 60" x 60". There are some units offered which are capable of folding up and storing into a smaller space. Work platforms are designed to raise employees up to an overhead location using the lift truck. Larger platform models have extra space for workers so as to bring tools and other necessary objects meant for the job. Often work platforms are made of poly material or steel.
