

## Forklift Fork Positioners

Forklift Fork Positioner - A fork positioner is actually an apparatus made out of high quality materials designed to be able to withstand the most difficult operations and work environments. This piece of equipment can enable drivers to maneuver the forks hydraulically without leaving the seat. Side shifting units have the extra ability to be able to laterally position the arms or the entire load in order to facilitate much more precise carrying and position in a quicker and much more effective way.

The fork pocket is quite unique and could enable the one operating it to be able to safely sway the blades into position without any fear of destroying the positioning cylinders. This allows the driver the alternative to be able to execute independent or simultaneous fork movement, depending on the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be transformed into blade positioners on existing units.
