

Toyota Forklift Part

Toyota Forklift Parts - In the U.S., Toyota Materials Handling inc., or TMHU, continues to be the top selling lift truck dealer since 1992. This company has been based out of Irvine, Arkansas for well over 40 years, offering a comprehensive line of quality lift trucks. With a great reputation of durability and reliability, Toyota lift trucks have thrived in the competitive materials handling market. Quality is the keystone of Toyota's renowned Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, situated in Columbus, Indiana. The majority of the Toyota lift trucks sold in the U.S. are built here.

All Toyota equipment and components designed within North America adhere to the International Organization for Standardization or ISO 14001 standard. The Columbus TIEM plant has been honored on many occasions for its commitment to relentless development and its environmentally friendly systems. It is the first and only maker to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. For instance, the Toyota 8-Series IC lift trucks emit 70% fewer smog forming emissions than the current centralized EPA standards and have complied with Arkansas's strict emission standards and regulations.

Toyota Material Handling, U.S.A. - The Industry Leader

The president of Toyota Material Handling, U.S.A., Brett Wood feels that TMHU's achievement comes from its commitment to create high quality lift vehicles while providing first-rate client support and service. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." TMHU's parent company, Toyota Industries Corporation, also known as TICO, is listed in Fortune Magazine as the world's leading lift truck provider and is amongst the magazines prominent World's Most Admired Companies.

Redefining Environmental Responsibility

Toyota's parent company, Toyota Industries Corporation, has imparted an excellent corporate values towards environmental stewardship within Toyota. Toyota's rich history of environmental protection whilst retaining economic viability can not be matched by other corporations and unquestionably no other resource handling maker can so far rival Toyota. Environmental responsibility is a key characteristic of corporate decision making at Toyota and they are proud to be the first and only manufacturer to offer UL-listed, EPA- and CARB-certified Compressed Natural Gas powered lift vehicles. Yet an added reason they remain a leader within the industry.

In 2006, Toyota launched the 8-Series line. The 8-Series signifies both Toyota's innovation and leadership in the industry. It features an exclusive emission system that surpasses Federal EPA emission values, and also meets Arkansas's more involved 2010 emission standards. The end creation is a lift vehicle that produces 70 percent fewer smog forming emissions than the current Federal standards allow.

Also starting in 2006, together with the Arbor Day Foundation, Toyota added to its commitment to the environment. To this day more than 58,000 trees have been embedded in the ground throughout national forests and neighborhood parks that were damaged by fires and other ecological causes. 10,500 seedlings have also been distributed through Toyota Industrial Equipment's system of sellers to non-profit organizations and local customers to help sustain communities all over the United States

Toyota's lift trucks offer better strength, visibility, efficiency, ergonomics, and all the foremost safety technology that has made Toyota an industry leader. The company's System of Active Stability, often known as SAS, helps limit the possibility of accidents and injuries, in addition to increasing productivity levels while minimizing the likelihood of merchandise and equipment damage.

System Active Stability senses numerous factors that could lead to lateral volatility and possible lateral overturn. When any of those conditions are detected, SAS instantly engages the Swing Lock Cylinder to steady the rear axle. This adjusts the lift truck's stability footprint from triangular in shape to rectangular, offering a major increase in stability which substantially reduces the likelihood of an accident from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also aids to avoid injuries or accidents while adding stability.

The SAS systems were originally adopted on the 7-Series internal combustion lift trucks which were put on the market in 1999. These systems helped drive Toyota into the lead for industry safety standards. Now, SAS is utilized on practically every new internal combustion models and is standard equipment for the new 8-Series. There are more than 100,000 SAS-equipped lift vehicles in operation, exceeding 450 million hours combined. The increased population of SAS-equipped vehicles in the field, along with required worker instruction, overturn fatalities across all models have decreased by 13.6% since 1999. Furthermore, there have been an overall 35.5% fall in industry wide collisions, loss of control, falls and overturn from a lift vehicle for the same period.

Toyota's rigid values extend far beyond the technology itself. The company believes in offering extensive Operator Safety Training courses to help customers satisfy and exceed OSHA standard 1910.178. Education courses, videos and assorted materials, covering a broad scope of subjects from personal safety, to OSHA policies, to surface and load situations, are offered through the seller network.

Toyota has sustained a permanent presence in the United States ever since its first sale. In 2009, Toyota Industrial Equipment Manufacturing, created its 350,000th lift truck. This reality is demonstrated by the statistic that 99% of Toyota lift trucks bought in

America today are manufactured in the United States.

TMHU is situated in Columbus Indiana and houses nearly 1 million square feet of production facilities over 126 acres of land. Facilities include a National Customer Center, as well as manufacturing operations and supply centers for equipment and service components, with the total commitment exceeding \$113 million dollars.
